2. All the following are components of compound microscope except

   a. Stage clips
   b. Fine adjustment knob
   c. Electron gun
   d. Binocular eye piece

3. Numerical aperture was first described by

   a. Robert Hook
   b. Anton von Leewenhoek
   c. Ernst Abbe
   d. Zaccharias Janssen

4. The resolving power of light microscope is

   a. 1 cm
   b. 1.0 µm
   c. 0.2 µm
   d. 2 nm

Answer the following

1. What is the importance of microscopy in microbiology?
2. Write down the names of different types of microscopes.
3. What principle defines an object as "microscope"?
4. What happens to light rays when they interact with an object?
5. Elucidate the lens function in image formation.
6. Define the characteristics of resolution, magnification and numerical aperture.
7. How do eukaryotic and prokaryotic cells differ in appearance under the light microscope?
8. Trace the pathway of light in brightfield microscopy.
9. Elaborate the role of condenser and image formation in dark field microscope.

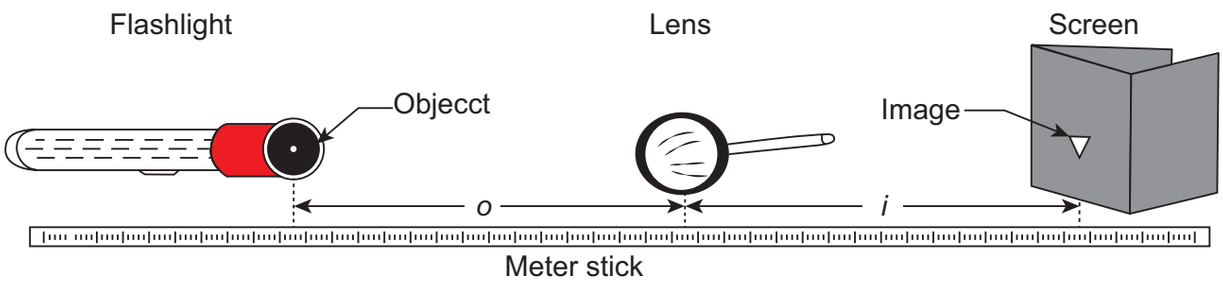

Student Activity

Experiment and enjoy……

Imaging Properties of a Simple Lens

Objective: In this experiment you will observe and measure the imaging properties of a simple lens.

Apparatus: You will need a good lens (magnifying glass), a flashlight, a viewing screen (tri-folded white copy paper), a meter stick and perhaps some modeling clay to hold things in place. Set all these things on a flat table about 1 meter wide in an area where the lighting can be dimmed.
