8. Why are the colonies growth on surface in pour plate method are quite larger than those within the medium?
9. Why is it important to invert the petridish during incubation?
10. State the various forms in the appearance of the colony. Name the pigments produced by *Pseudomonas aeroginosa.*
11. Colony characteristics will be studied and identified clearly by using the nutrient agar medium in agar rather than agar slant. Why?
12. Write about the elevation of the bacterial colony?
13. Explain streak plate/pour plate/spread plate method.
14. Why is agar mainly used as a solidifying agent even though other solidifying agents are available?
15. How do you differentiate enrichment medium from selective medium?
16. Give a list of pigment producing bacteria.
17. Explain the opacity of a bacterial colony.
18. Explain the special purpose media in detail (any 5).
19. Why should we use a streak plate to grow a bacterium rather than on agar medium slant or in broth medium?
20. Expain the colony morphology of bacteria with diagrams.

Student Activity

1. The student will list out the substances which contain agar in their routine life and the role of agar in it.
2. Students will prepare chart/scrap book containing pictures of different types of media and colony types of bacteria and fungi.
3. Collect decayed/spoilt food for macroscopic observation.
