

The non-human biological forms also possess intrinsic value, inherent worth and identity. It believes in biocentric equality. The human beings need to satisfy the vital needs by making careful use of this biodiversity. Preservation of biodiversity is indispensable. The interference of human beings on the domain of the non-human sphere of the planet so for, is destructive, excessive and unacceptable. There is an urgent need to limit the population of the world as the current population explosion has injected enormous stress on the ecology.

We should change our technology, philosophy, economy and politics so that ecological crises can be rectified and averted in the future. The human beings are 'ecological selves' the materialistic and consumerist life style must be changed and a new ecologically-sensitive social and economic order must be created. We should reduce our 'ecological footprint' by adopting a meager resources based life style. As the nomenclature indicated deep ecology asks deeper questions of how and why examining philosophically the impact of human life as one part of the ecosphere on other components.

The Earth dose not belong to us: we belong to the Earth. - Marlee Martlin

Tenets of Deep Ecology vs Shallow Ecology	
The Eight-Tenets of Deep Ecology Paraphrased	**The Eight-Tenets of shallow Ecology**
1. All creatures on Earth have intrinsic value.	1. All creatures on Earth have value only for their usefulness to humans.
2. The whole diversity of living beings. simple as well as complex. contributes to life's richness.	2. Complex creatures (ie humans) are more important than simpler ones.
3. Humans should use other beings only to satisfy their basic needs.	3. Humans should always use all resources for their material and economic advantage.
4. The health of non-humans depends on decreasing the number of humans.	4. The human population can increase without restraint.
5. Human interference with the world is excessive and worsening.	5. Technological progress will solve all problems.
6. Human policy (economics. technology and ideology) must change radically.	6. Materialism and consumerism should govern human society.
7. Quality of life is more important than standard of living.	7. The standard of living should keep rising.
8. Every human who believes in these points must work for change.	8. Leave environmental problems for the experts to solve.
