5. Order of the strokes for getting power.
   a) Exhaust,suction, power, compression
   b) Suction, exhaust power, compression
   c) suction, compression power, exhaust
6. Which is used to open the valve in Engine?
   a) Crank shaft.
   b) Cam shaft
   c) Fly wheel
7. Which liner is does not contact with cooling water?
   a) Dry liner
   b) Wet liner
   c) None
8. Where is vibration Damber located?
   a) In front of the Crank shaft.
   b) Back side of the crank shaft
   c) In front of the Cam shaft.
9. Which indicates cycle of operation engine?
   a) Exhaust, suction, power, compression
   b) Suction, exhaust power, compression
   c) suction, compression power, exhaust
10. Which is used to prevent leakage between cylinder and cylinder head?
    a) Gasket
    b) Oil seal
    c) Dust cover

TLZATG

Answer the following questions:

1. Who is invented Petrol Engine?
2. Who is invented Diesel Engine?
3. Write any 10 important parts of I.C. Engine.
4. What are the two types of cylinder liners?
5. What is the purpose of Gasket?
6. State any five method to control the expansion of the piston due to over heat.
7. Name the types of Piston.
8. What is meant by Vibration Damper?
9. In how many ways Piston and connecting rod are connected? Mention the names.
10. Draw a neat sketch of Over head Puppet Valve mechanism and explain the same.
11. Draw a neat sketch of Straight Puppet mechanism and explain the same.
12. Draw a neat of Four Stroke Petrol Engine and explain the working principle.
