Table 6.1 Effects of pollutants

Pollutants	Effects
1. Carbon monoxide	Reduces the oxidation in the blood. It affects the nerves, the heart and the eyes.
2. Nitric oxide	Affects human's cells and blood flow.
3. Hydro carbon	It affects the human eyes.
4. smoke	It affects the human eyes.
5. Particulate matter (solid, liquid pollution)	It leads to cancer, bronchitis and allergy like diseases by inhaling.
6. Sulfur dioxide	It affects human beings and plants.

engine itself in the vehicle. The way of supplying the fuel and air inside the engine combustion chamber plays an important role in achieving complete combustion. The system used for supplying appropriate air and fuel at the appropriate timing inside the combustion chamber of the engine is called as the "intake system". The important components of the engine intake system are

1. Fuel Tank
2. Fuel Filter (Petrol & Diesel)
3. Air Filter
4. Fuel Pump (Petrol and Diesel)
5. Feeding Pump
6. Inlet Manifold
7. Carburettor
8. Injector
9. Nozzle
10. Combustion chamber.

6.2. FUEL TANK

The fuel tank is used to store the fuel needed to produce output energy in the vehicle. It is made of Galvanized Iron by pressing process. This fuel tank varies depending on the cubic capacity of the vehicle. Similarly, the location of this tank in the vehicle will vary depends on the type of vehicle. A separate tank will be generally mounted on the top of the vehicle chassis frame according to the fuel filling system. The fuel tank is shown in Figure 6.2.

Figure 6.2 Fuel Tank

6.3. FUEL FILTER

There is a possibility of having fuel contaminated with dust particles while filling the fuel or during storage. If the contaminated fuel is supplied to the chamber, it leads to incomplete combustion
