

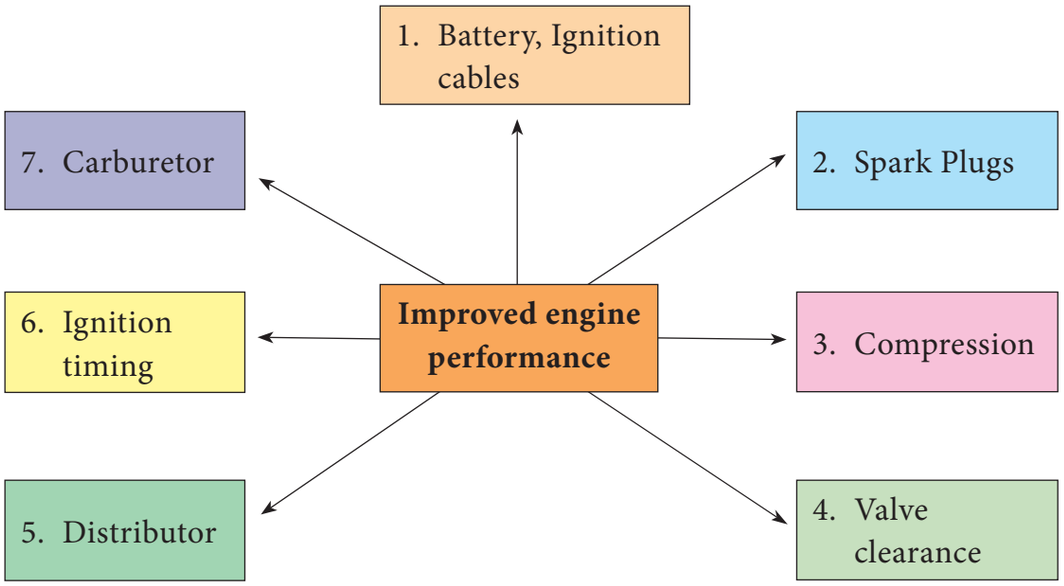

Figure 6.14 Engine tune-up procedure

- The Fuel pump should be cleaned
- The carburettor should be cleaned
- Diesel injection pump should be cleaned well
- Diesel injector should be cleaned well

(5) Lubricating System

- Pressure gas working should be tested
- Oil filter should be cleaned
- Crank case oil level should be tested
- Engine oil pressure should be checked

(6) Cooling unit testing

- Have to check the end play and a leak in the water pump
- Should check the leak in the radiator hose
- Fan belt should be checked

(7) Electrical system testing

- Battery, wire connection should be cleaned
- To test the battery condition, electrolyte test should be performed
- Generator connection should be checked
- Starter switch should be checked

(8) Clutch plate should be checked

(9) With the help of the dynamo the engine performance should be measured

6.15 POLLUTION

In this world, human and many living organisms inhale oxygen from air to survive. So that the air should be clean and make it free from pollution. In doing this we have to know the formation of pollutants and measures to reduce them. Every human inhales nearly 15 kg of oxygen. So if the air is polluted all the living organisms will be affected. Pollutants and its effects are already reffered in Table 6.1.
