1.6 VEHICLE SAFETY

TKU4XY

At present, usage of the vehicle is highly mandatory. Further, people are travelling a large distance in a shorter time. Hence, they are using their own vehicle to travel at the required place without using the public transport. It would be highly beneficial for the vehicle owner if they understand the condition of their vehicles or else the vehicle may breakdown during the travel. To avoid vehicle breakdown, to safeguard the people travelling, safety and warning devices are installed. Situations like vehicle theft, an accident during reversing the vehicle, on the four road junctions etc., can be avoided with the help of warning devices. This is called as Vehicle safety. Shown in Figure 1.6.
