3. It should not affect the fuel economy
4. Screw arrangement should be made properly for the various speed and load of the engine

9.5.3 Types of Carburettor

Carburettor can be classified as follows

9.5.3.1 Down draught carburettor

(I) In this type of carburettor the air would come from induction manifold to downward direction due to gravitational force. It will be placed above the induction manifold. Most of the vehicles use the down draught type carburettor. The fig 9.5.3 shows the down draught carburettor.

9.5.3.2 Up draught carburettor

In this type, air-fuel mixture goes from bottom to top of the induction manifold. The fig 9.5.3 shows the up draught carburettor.

9.5.3.3 Side draught carburettor

In this type, air-fuel mixture goes from one side to another side way. This is placed side of the induction manifold. Figure 9.5.3 shows various types of Carburettor.

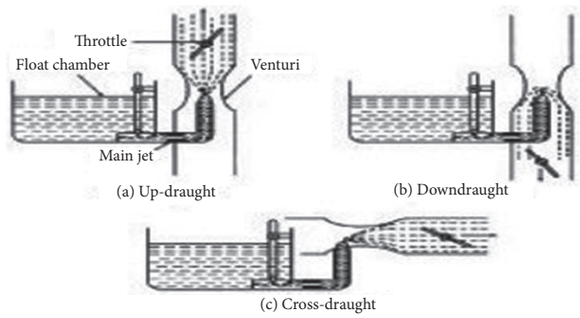

Figure 9.5.3 Various Types of Carburettor

Semi down draught carburettor:

This type of carburettor is the combination of down draught and side draught carburettor .in this type petrol-air mixture will be slightly slanting position.

(II) According to working of carburettor,

a) Constant choke carburettor:

In this type by keeping the area of the orifice constant and changing the pressure using venturi, carter, solex and zenith are the types coming under constant choke carburettor

b) Constant Vacuum carburettor:

By changing the area of orifice and keeping pressure as constant. This type of carburettor is called constant Vacuum carburettor comes under this type.

(III) According to number of barrel,

1. Single barrel carburettor:

Generally in four cylinder engines single barrel carburettor is being used. it contains only one barrel along with fuel jet, venturi, choke valve and the throttle valve.

2. Dual or multi barrel carburettor:

In this each barrel has the separate parts that are associated with the system. For each barrels there will be a separate connection to inlet manifold. This type of carburettor mixes the air fuel ratio uniformly.

9.5.4 Simple Carburettor

Without any of the advanced technologies in the system supplies the air
