PREFACE

We take pride in presenting this text book on Basic Automobile Engineering Theory for the students of Higher Secondary and express our deepest gratitude to the learners, teachers and the SCERT for their enthusiastic support and response.

In the preparation of this text book enough care has been taken to introduce the fundamentals concepts to make the students to understand the subject, in addition to dispensing advanced topics to keep the students updated with the modern developments.

The interesting facts related to the subject are highlighted under "Do you Know" box item. Suitable activities have been suggested to the students to familiarise them with various components of the Engine and able to obtain sufficient practical exposure.

Activities are included at the end of each chapter to encourage the students to have an additional exposure in the process of learning. It is mainly to make the students to acquire analytical skills and improve their understanding and also to help them for the purpose of examination. Students are encouraged to learn the new topics from the related know old topics and to practice critical thinking to get innovative idea required for vocational education.

To facilitate further learning, reference books and websites have been suggested for each chapter. Suggestions and constructive criticism are most welcome to be duly considered and incorporated in future.
