service station and repaired with the tools. This process of repairing is known as bench tools. Bench tools are classified into many types.

2.1.2.1 Ordinary Bench Tools

Tools which are used to repair the defected parts of the vehicle in the service station are known as ordinary bench tools. Tools which are used for this purpose are described below. Fig 2.1.2(a) shows Anvil.

a) Anvil

It is used to repair the Bending, shearing, and rolling of the iron and sheet metal parts in the required manner.

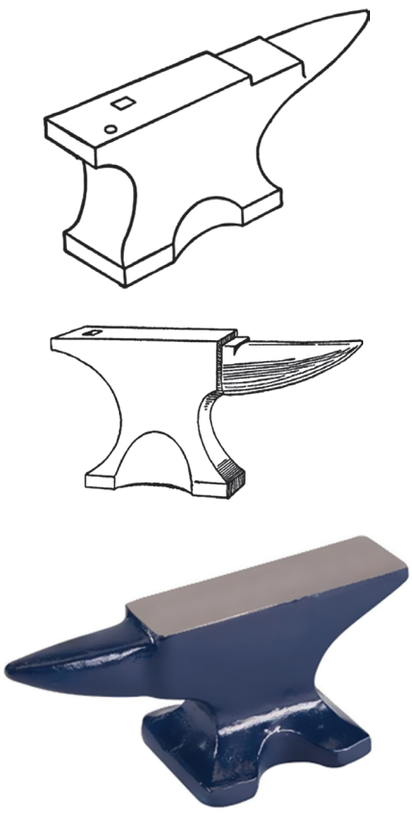

Figure 2.1.2(a) Anvil

b) Bench Vice

A bench vice is a device used for cutting or rubbing portions of the spatial part or to fold, or to tighten the bolt and nut, to retain the nipple. It is connected to the bench-lob holes in the workshop. The two jaws in it are used to tighten the object to work. Fig 2.1.2(b) shows Bench Vice.

c) Surface Plate

The surface plate is used to check whether the surface of the repaired part is equal to the surface plate, to adjust the size lines and to verify the corners are in the level. It is made of heavy iron plate. Its surface will be equal and erroneous. Figure 2.1.2(c) shows Surface Plate.
