2.2.1 Drilling Machine

Instead of drilling a hole by hand, drilling is made by means of an electric motor. This is done with the use of drill bit which is operated by electric motor. The to and fro motion of drill bit is controlled by a wheel. It requires minimum effort and time compared to hand drilling. Drilling machines are again classified into many types. They are,

a. Hand Drilling Machine
b. Flexible Drilling Machine

a. Hand Drilling Machine

These drilling machines are used to drill the hole in the wall and various portions of vehicles. It is also called as a Portable drilling machine. Fig 2.2.1(a) shows Hand Drilling Machine.

b. Flexible Drilling Machine:

These types of drilling machines are used to drill in the parts like crankshaft journals and in the connecting rod oil bath. These are mainly used to drill in the curved region. Fig 2.2.1(b) shows Flexible drilling machine.
