2.2.4 VULCANIZING MACHINE

Vehicle tire and tubes should maintain in a proper manner. Otherwise severe effects may be taken place. While the vehicle is traveling on road, if a sharp object in the road gets perforated in the tire, the air in the tire tube gets deflated and due to this vehicle driving motion gets affected. If it continues its motion then the tube gets to tear off. This is known as a puncture. This type of puncture cannot be cured by the cooling method. Curing this puncture with raw rubber is called as Vulcanizing. High pressure and temperature are required to vulcanize the rubber material. The machine which is used to do this vulcanizing process is named as a vulcanizing machine. Shown in Fig 2.2.4.

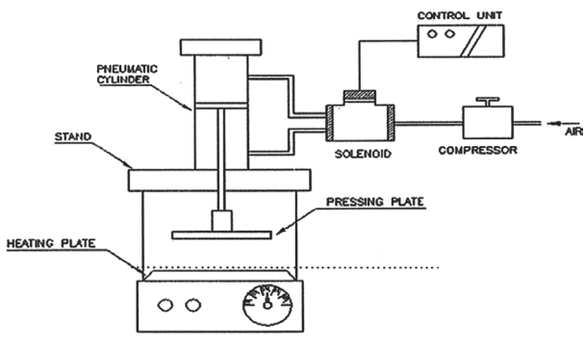

Figure 2.2.4 Vulcanizing Machine

2.3 GARAGE TOOLS

Measuring tools required for automobiles service station and garage are classified broadly two types

1. Direct tools
2. Indirect tools

2.3.1 DIRECT TOOLS

a) Steel Rule
b) Outside Micrometer
c) Vernier Caliper
d) Wire Gauge
e) Voltmeter
f) Ammeter
g) Hydrometer
h) Radius Gauge
i) R.P.M. Gauge
j) Pressure Gauge
k) Speedometer
l) Oddo Meter

a) Steel Rule

It is a metal steel rule which has both metric and British units. It is a direct measuring instrument. It is made up of spring steel
