

International Organization for Standardization

The International Organization for Standardization (ISO) is an international standard-setting body composed of representatives from various national standards organizations.

Founded on 23 February 1947, the organization promotes worldwide proprietary, industrial and commercial standards. It is headquartered in Geneva, Switzerland and works in 162 countries.

Use of the standards aids in the creation of products and services that are safe, reliable and of good quality. The standards help businesses increase productivity while minimizing errors and waste.

By enabling products from different markets to be directly compared, they facilitate companies in entering new markets and assist in the development of global trade on a fair basis.

The standards also serve to safeguard consumers and the end-users of products and services, ensuring that certified products conform to the minimum standards set internationally.

or stainless steel. Surface finish was done over the steel rule in order to avoid corrosion. Satin chrome is used for surface finish process. It is available in following measurements, Steel Rule shown in Fig 2.3.1(a).

- 150 mm
- 300 mm
- 600 mm

b) Outside Micrometer

It is used to measure the external diameter of a work as simple, quick, straight and accurate manner. It can be used to measure accurately 0.0001 inches or 0.01mm diameter of a screw. Besides these, micrometres are available in many formats, sizes as needed. Fig 2.3.1(b) shows Outside Micrometer.
