f) Ammeter

It is used to measure the amount of current passing through the circuit. It is used to verify the faults of the industry and household devices. It helps to check the amount of electricity. The unit of the ammeter is "Ampere". Fig 2.3.1(f) shows Ammeter.

Figure 2.3.1(f) Ammeter

g) Hydrometer

Hydrometer is used to calculate the density of the insulating fluid (diluted sulfuric acid) in the battery. The amount of liquid in the hydrometer is used to calculate the density of the liquid. While pressing the rubber bulb in the hydrometer, the liquid come inside the cylinder from the cell. Fig 2.3.1(g) shows Hydrometer.

Figure 2.3.1(g) Hydrometer

h) Radius Gauge

Radius gauge is used to measure the specific radius of the projected surface area of the job or the corners of the job. Radius gauge is also used to measure and test the circumference of the curve in the corner or corners. Radius Gauge is shown in Fig 2.3.1(h).

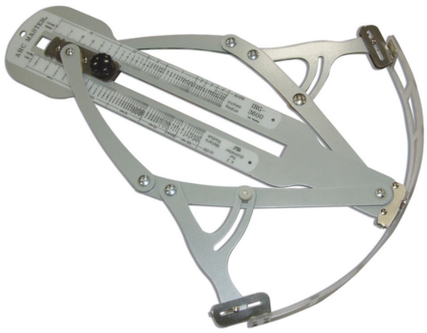

Figure 2.3.1(h) Radius Gauge

i) RPM Gauge

It is used measure the speed of the engine. RPM gauge is used to show the number of cycles per minute for each minute. The red pin is used to show the cycle of 6000 rpm to 7000 rpm. But nowadays digital displays are used. Fig 2.3.1(i) shows RPM Gauge.
