2.3.4(i) Honing Machine

Honing machine is used to regulate the depreciation in the IC engine cylinder, when the cylinder depreciation level is below 0.01mm. Cylinder wall which is made with the use of cylinder bearing is smoothened by cylinder honing. Fig 2.3.4(i) shows Honing Machine.

Figure 2.3.4(i) Honing Machine

2.3.4(j) Timing Lighter

This equipment is used to check whether the spark plug is producing the spark in proper firing order in the engine cylinder. Figure 2.3.4(j) shows Timing Lighter.

Figure 2.3.4(j) Timing Lighter

2.3.4(k) Cell Tester

It is used to check the life cycle of battery cell and is used to check the amount of electric charge. This is checked by connecting the positive and negative poles of the battery by wire and by doing this if it is lighted up then it is understood that battery is having charge. Fig 2.3.4(k) shows Cell Tester.
