water vapor etc., Natural gas are stored in tanks under pressure and hence it is called as compressed natural gas. Octane rating is high. Cars and trucks with specially designed engines produce fewer harmful emissions than gasoline or diesel. CNG fuel systems are completely sealed, the vehicles produce no evaporative emissions. Operating cost of the vehicle is low. Figure 3.2.2.3 shown Compressed Natural Gas Filling Station.

3.2.2.4 HYDROGEN

Many test engines have been developed to use Hydrogen as an alternative fuel. Hydrogen can be produced from diverse domestic resources. Hydrogen is abundant in our environment. It's stored in water

(H_2O), hydrocarbons (such as methane, CH4), and other organic matter. One of the challenges of using hydrogen as a fuel comes from being able to efficiently extract it from these compounds. Hydrogen is also used in zero-emission electric vehicles that run on electricity generated by fuel-cell by the petrochemical reaction. Hydrogen is environmental freely. Figure 3.2.2.4 shown Hydrogen Preparing and Filling Process.
