Who made the first motor cycle?

First motor cycle was designed and built by the German inventors Gottlieb Daimler and Wilhelm Maybach in 1885.

It was designed as a testbed for their new engine, rather than a true prototype vehicle.

14. Brake Mean Effective Pressure (BMEP) is the mean (average) pressure on the piston uniformly acting during the power stroke, which would produce the same measured (brake) power output.

15. Specific fuel consumption (SFC) is defined as the total fuel consumption per hour per kW power developed. SFC is the rate of fuel consumption per kWh. It allows comparing engines of different sizes to see which is the most fuel efficient. It helps to determine which engine uses the least amount of fuel while producing high power. When Indicated power (IP) is used to calculate SFC, then it is known as Indicated Specific fuel consumption (ISFC) and when Brake power (BP) is used to calculate SFC, then it is known as Brake Specific fuel consumption (BSFC).

4.4 ROYAL AUTOMOTIVE CLUB RATING

RAC Rating was introduced by the Royal Automobile Club in England. The tax horsepower or taxable horsepower was an early system by which taxation rates for automobiles were calculated. Taxable horsepower is a calculated figure based on the engine's bore size, number of cylinders but does not reflect on developed horsepower.

RAC rating = (D x N) / 2.5

D = the diameter of the cylinder in inches [1" = 25.4mm], and

N = the number of cylinders

4.5 SOCIETY OF AUTOMOTIVE ENGINEERS RATING

Society of Automotive Engineers Rating is based on net power developed on the engine. Net power is the power developed by the engine by removing engine belt-driven accessories, air cleaner, emission controls, exhaust system, and other power-consuming accessories.

Student Activity

1. Students should prepare the list of most widely used cars by the public.
2. Students should prepare an album containing the cars used in India and other foreign countries.
3. Students should visit the nearby workshops to learn the functioning of Internal and External combustion engines
