Since the cost of the diesel fuel is less and high energy is available, this engine is widely used for transportation, though the maintenance cost is more.

5.3 PARTS OF AN IC ENGINE

1. Cylinder Block
2. Cylinder Liner
3. Cylinder Head
4. Crank Case
5. Oil Sump
6. Gasket
7. Piston
8. Connecting rod
9. Crank Shaft
10. Timing Gear, Timing Chain
11. Vibration damper
12. Cam shaft
13. Valve and Valve mechanism
14. Inlet Manifold and Outlet Manifold
15. Flywheel
16. Silencer

Other components like oil pump, fuel pump, carburetor, distributor, water pump, air filter, oil filter etc are also attached to the engine. The major components of IC Engine is shown in Fig 5.3.

The Material of the major components are shown in Table 5.1.

Cylinder Block

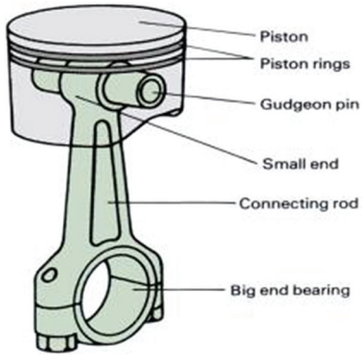

Cylinder Head

Crank Case

Silencer

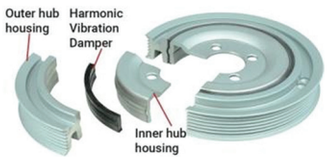

Piston Assembly

Cam Shaft

All Types of Valves

Vibration Damper

Manifold

Flywheel
