- In the **Name text box** give a suitable name to the table.

- Specify the number of columns and rows either using spin arrows or enter the value directly.

- Click the **Heading** check box to make the first row of the table as heading, The **Repeat heading** check box can be enabled to repeat the heading row when the table spans more than one page.

- Select the **Border** check box to display table with grid.

- Click **OK** button to create a table.

Entering data into theTable :

Once the table is created with the specified number of rows and columns, you are ready to enter data.

The table is normally created with uniform row height and column width in the entire area. The insertion pointer is placed in the first cell(intersection of row and column) and you can start typing the text into the cell. You can easily move from one cell to the next cell towards right by pressing the **Tab** key and press **Shift + Tab** to move towards left. Once the table is created the Table formatting toolbar appears on the formatting toolbar as shown in Figure 7. 2. This toolbar can also be opened by **View** → **Toolbars** → **Table**.

7.1.2 Inserting And Deleting Rows And Columns

Inserting Rows

To insert rows in a table there are different ways :

1. The easiest way to add a row is to press **Tab** from the last cell.

2. To insert a single row anywhere, place the insertion pointer in that particular cell and click the **Insert row** icon from the Table Formatting toolbar.

3. To insert more than one row, click **Table** → **Insert** → **Rows,** the Insert Rows dialog box appears as shown in Figure 7.3, enter the value using spin arrows or type the number directly. In the position option, select Before or After radio button to specify the position of the row.

4. Click OK button.
