7.1.3 Merging and Splitting Cells

To merge a group of cells:

1. Select the cells to merge.
2. Click **Table → Merge Cells** or click **merge cells icon** or **Right Click → Cell → Merge,**
3. The selected cells will be merged into a single cell.

To split a single cell:

1. Place the insertion pointer inside the cell.
2. Click **Table → Split Cells** or click **Split cells icon** *or* **Right click → Cell → Split**, the split cells dialog box appears as shown in Figure 7.5.

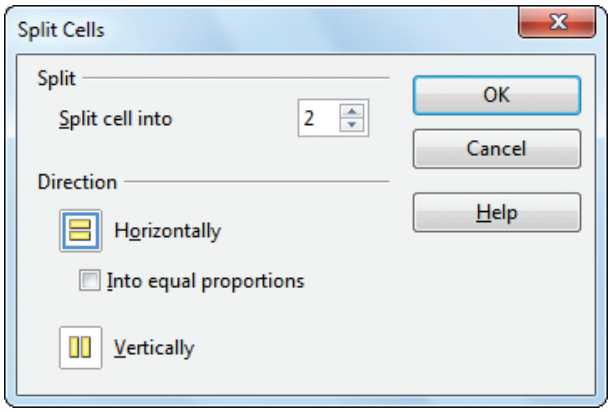

Figure 7.5 Split cells Dialog Box

3. Select the number of cells to split using spin arrows or enter the value directly.
4. Select the direction of the split, horizontally (for rows), or vertically (for columns).
5. A single cell is split into the desired number of rows and columns.

7.1.4 Resize the position of Table

A newly created table will occupy the entire width of the page area by default. The table can be resized as per our requirement:

- To resize a table quickly, move the mouse over the table edge until the cursor becomes a double headed arrow, and drag the border to its new desired position.

To resize a row height / column width using Mouse :

To resize row height

- Move the insertion pointer over the horizontal border for the row height now the insertion point will change into double headed arrow , click and drag to resize the row height.

To resize column width

- Move the insertion pointer over the vertical border for the column width now the insertion pointer will change into double headed arrow , click and drag to resize the row height.

To resize column width using dialog box

- To give precise measurement for column width, Click **Table → Table Properties**, the Table Format dialog box as shown in Figure 7.6
