### 7.2.4 Autoformating Table

The AutoFormat option helps to format the table with predefined styles. This is a simple and easy way to format tables. AutoFormating can be applied by :

- Create a Table with the desired number of rows and columns.
- Click **Table → AutoFormat**
- A set of already designed styles with predefined names are available in the Auto Format dialog box as shown in Figure 7.10.
- Select the desired style and click OK button.
- The selected style is applied into your table.

## 7.3 Inserting Formulae in Tables

We can use formulae in Writer to perform spreadsheet like calculations easily.

To perform calculations on the data in the table

- Create a Table with the following data:

| Item sold | Jan | Feb | Total |
|---|---|---|---|
| Books | 15 | 70 | |
| Pens | 30 | 50 | |
| Ruler | 25 | 25 | |
| Total Goods | | | |

Click in the empty cell where you want a calculation.

- Choose Table → Formula or press F2 and you will get the spreadsheet-like toolbar with the formula entry field.

*Figure 7.11Formula Tool bar*

- If you want to add a range of cells then in the current cell type = <B2:B4>and press Enter key. The total will appear as given in the example below.

**NOTE**

This method is applicable only to find summation of the selected range. The cell address must be in capital letters.

| Item sold | Jan | Feb | Total |
|---|---|---|---|
| Books | 15 | 70 | |
| Pens | 30 | 50 | |
| Ruler | 25 | 25 | |
| Total Goods | **=<B2:B4>** | | |

- The formula Toolbar as shown in Figure 7.11 can be used when the user wants to perform other arithmetic calculations.
