WorkShop Practice:

1. Open the worksheet which was created in Illustration 1.
2. Add one more column heading "Average" in I1
3. Create a formula to find the average of all marks in I2.
4. Apply the formula to the remaining cells.
5. Save the changes and close the file

9.8 Auto Fill Feature:

You have learnt how to copy and paste a formula from one cell to other cells in the previous section. The process of Copy and Paste can be replaced by a click and drag and it is called as "**Auto Fill**". This is an alternate way to copy and paste.

Auto Fill feature fills the contents from one cell to all the dragged cells. The content may be a data or formula. If you fill a relative formula, all the addresses of filled formulae will be changed.

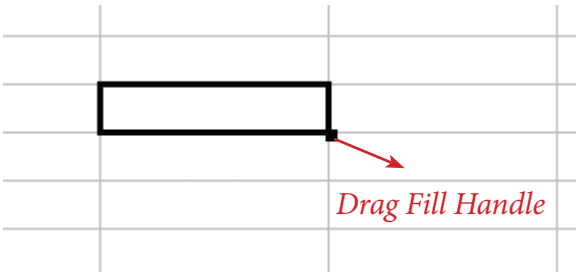

Figure 9.29 Drag fill handle

Cell pointer's "**Drag fill handle**" is used to auto fill. Just click and drag this handle to fill the contents. It can be dragged towards right or down. Same can be achieved by **Edit →Fill → Down** (or) **Edit → Fill → Right.**

9.8.1 Auto Fill Series:

Auto Fill is also used to generate a series of values. For example, if you want to generate 1,2,3……. up to some value; it can be done by a simple clicking and drag process.

Generating whole number series: (Refer **Figure 9.30**).

Step 1: In cell A1, type as 1 (one) and press enter

Step 2: Click A1 to place the cell pointer

Step 3: Click "Drag Fill Handle" of cell pointer; now the mouse pointer becomes a small + sign

Step 4: Drag over the cells; while dragging, the generated values will be displayed.

Step 5: Release the mouse pointer. Selected cells will be filled with series of values.
