### 9.8.3 Date Arithmetic:

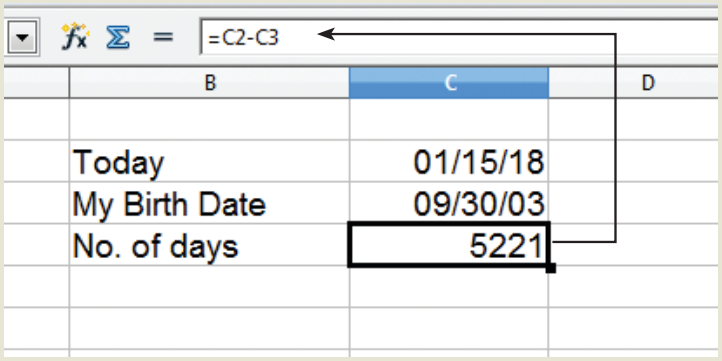
Manual date calculations can be tricky because you have to keep track of the number of days in a month. In spreadsheets, date calculations become very simple. Here you can add a number to a date and arrive at a new date, find the difference between two dates and use a wide variety of function and formats to get what you want.

For example, enter a date 02/26/2018 in a cell, say A2. Suppose you want to calculate the date 80 days after this date. To do so, enter the formula, = **A2 + 80**, in another cell, say A4.

The date 05/17/18 appears in the cell.

**To Find out how many days you were born? your birth?**

- Type today's date in first cell.
- Type your birth date in second cell.
- Type the following formula in third cell = first_cell_reference – second_cell_ reference



## Editing and Formatting Worksheet

### 9.9 Inserting Columns, Rows and Cells

In Calc, columns, rows and cells can be inserted individually or in groups.

### 9.9.1 Inserting a Column:

When you insert a new column, it is inserted to the left of the current column. The location of the cell pointer present, is the Current column. In Calc, you can insert a new column anywhere in the worksheet.

**Step 1:** Select the column where a new column to be inserted.

**Step 2:** Right-click on the selected column name. A pop-up menu appears.

**Step 3:** click the **"Insert Columns"** option from the menu.
