

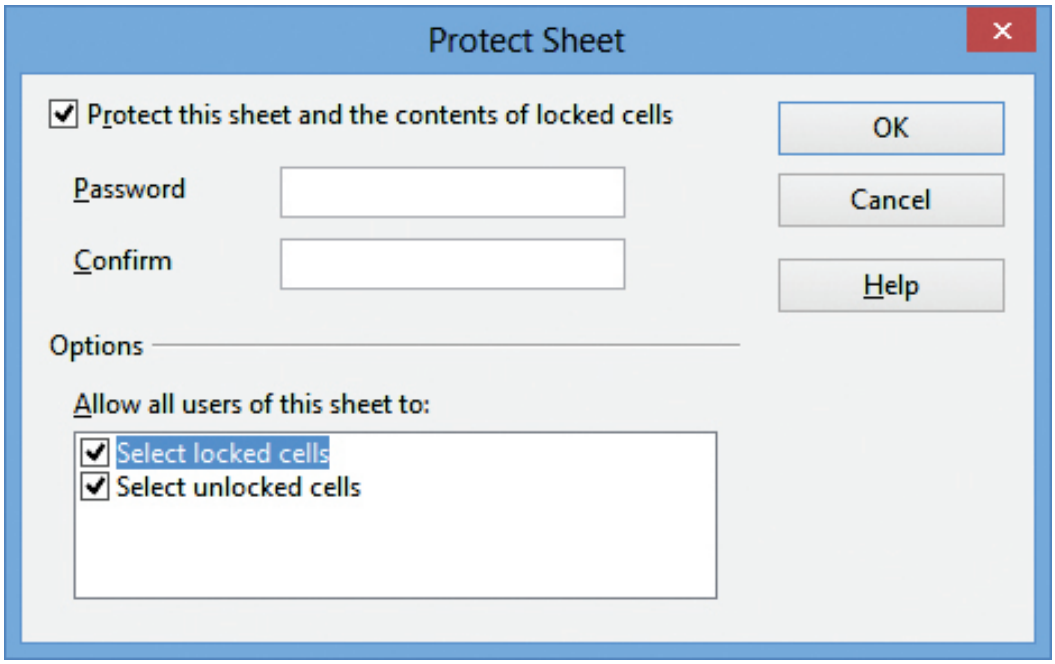

Figure 10.20 Protecting the Sheet

In the Format Cells dialog box - for cell protection under the Protection group:.

4. Enable **Protected** to prevent changes to the contents and the format of a cell.
5. Enable **Hide formula** to hide and to protect formulae from changes.
6. Enable **Hide when printing** to hide protected cells in the printed document. (The cells are not hidden on screen).
7. Click **OK**.
8. Apply the protection options.

   8.1 To protect the cells from being changed / viewed / printed according to your settings in the **Format→ Cells Dialog box,** choose **Tools → Protect Document → Sheet**.

   8.2 Enter a password with of atleast 5 or more characters.

10.10 –Cell Referencing

10.10.1 Relative Addressing

The cell from **A1** to **A3** is addressed as **A1:A3**. Assume **A4** has the formula **=SUM(A1:A3).** When the same formulae is copied to column **B4** Relative Addressing automatically changes the formulae in **B4** as **=SUM(B1:B3**). Relative here means that the reference to this area will be changed automatically when you copy the formulae.
