10.11.2 – Familiarization with the categories of functions

The most commonly used functions are the built-in functions, which is available in .the Function Wizard. To open the Function Wizard choose **Insert→ Function** or press the shortcut key **Ctrl+F2**.

1. Once the Function Wizard is open, Select a **Category** from the Category dropdown box and select the function from the Function list box.

2. When you select a function its description appears on the right-hand side of the dialog box. Double-click on the required function.

3. The Wizard now displays a textbox where you can enter data manually in the text box and the result will be displayed in the Result text box

10.11.3 – Working with the functions in Mathematical and Statistical Category

10.11.3.1 - Mathematical functions under Mathematical Category:

Various Mathematical functions are readily available under Mathematical category for mathematical calculations.
