4. Choose a **Chart type** and its option type. Then click Next button.

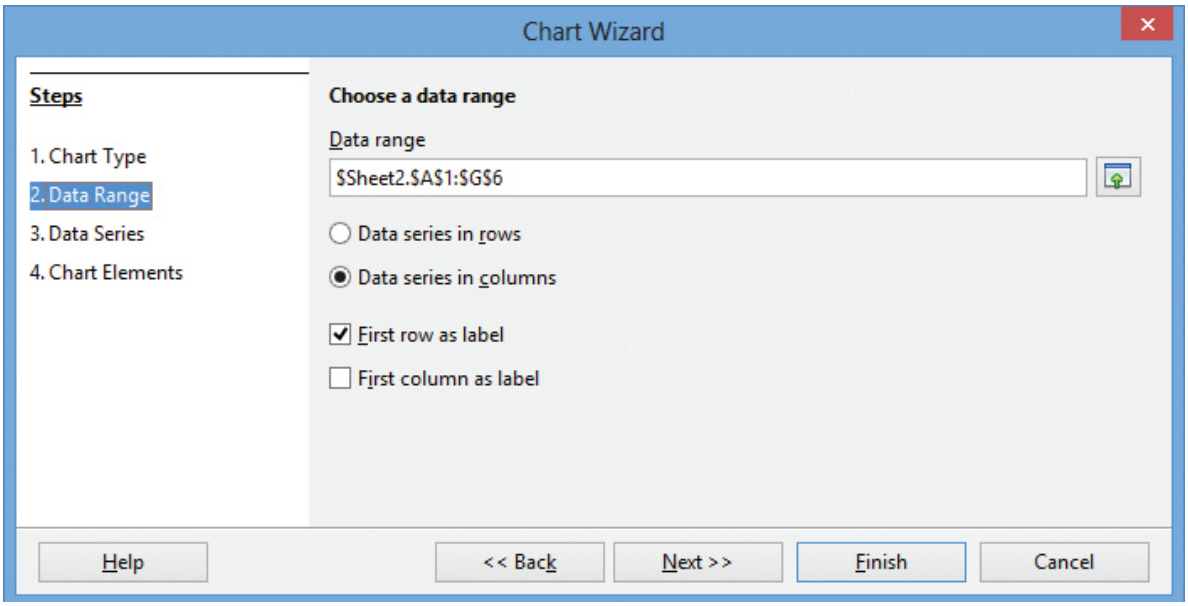

Figure: 10.35c Data Range

5. In Step 2, **Data Range**, helps to manually correct any mistakes made in selecting the data. Click one of the options for **Data series in rows** or in **columns**. Check whether the data range has labels in the first row or in the first column or both. Then click the **Finish** button, or click **Next** to change some more details of the chart.

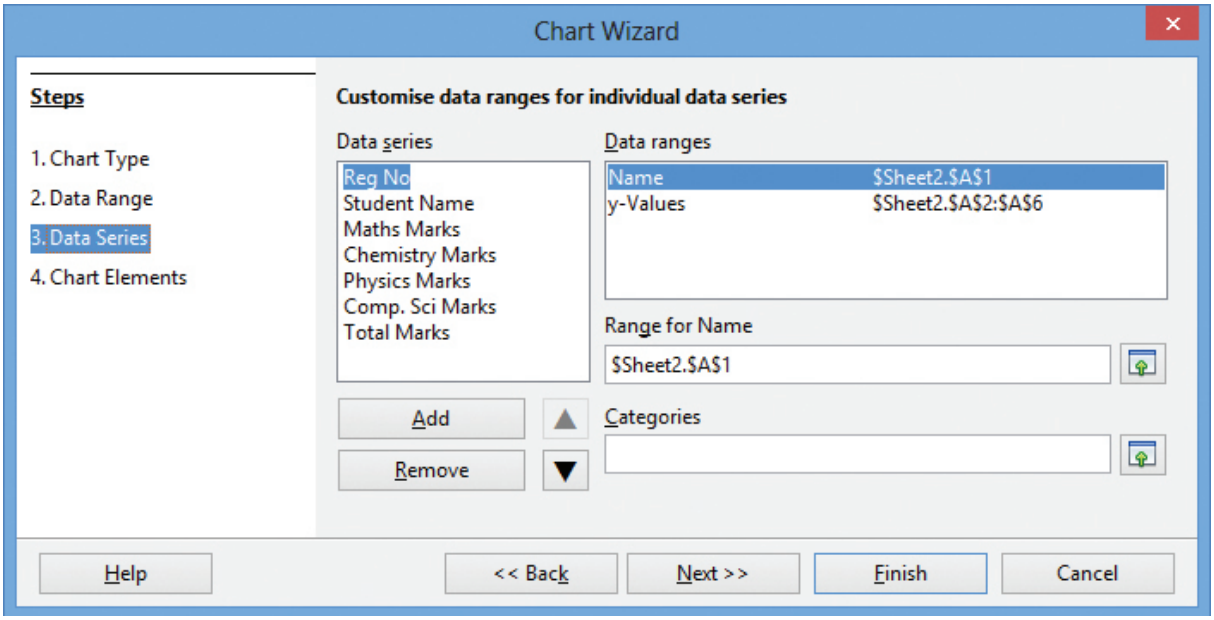

Figure: 10.35d Data Series

6. The **Data Series** list box contains a list of all data series in the current chart.

- To organize the data series, select an entry in the list.
- Click **Add** to add another data series below the selected entry. The new data series has the same type as the selected entry.
