**Step 2:** On the Edit Print Ranges dialog box, type the rows in the text entry box under Rows to repeat. For example, to repeat rows 1 and 2, type $1:$2. This automatically changes Rows to repeat from "- none –" to "- user defined –".

**Points to Remember:**

- Data Tools are used to manipulate the information in the spread-sheet
- Conditional format gives different font size, font colour and background colour for different data based on the user requirements.
- Sorting is used to re-arrange the items in ascending or descending order based on alphabets or based on values.
- Filters are used to show only the selected portion of data from a large size database
- Input Help is used to provide various options like week, month etc
- Header and Footer are some titles (such as Document Title, Author Name) or references (such as page no, number of pages, date) or remarks to be printed in the top (called as Header) and bottom of the page (called as Footer).
- If a sheet is printed on multiple pages, we can set up certain rows or columns to repeat on each printed page.

## Evaluation

QY1JIQ

### Part I

**Choose the correct answer**

1. There are 10000 rows in a worksheet. The user needs to view only particular rows of the database. Which of the following tool is used?

   A. Sorting B. Merging C. Filtering D. Formatting
