13.2. Modifying the slide transition

Slide transitions are the effects that take place when one slide gives way to the next one in the presentation, like Roll down from top or Fly in from left. They add dynamic style to a slideshow, smoothing the transition between slides.

You can add transitions while in Slide Sorter view or in Normal view. To see the effect of a selection, you need to be in Normal view and select the Automatic preview checkbox in the Slide Transition page of the Tasks pane.

You can apply a single type of transition to all slides in the presentation or apply a different transition to any single slide, even having a different transition for every slide in the show.

Applying a slide transition effect

- In the Tasks pane, choose **Slide Transition (Figure 13.32).**
- In the Slides pane or **Slide Sorter view**, select the slides to which you want to apply the transition.
- If you want to apply the transition to select slides, he transition to apply to all slides.
- In the **Apply to selected slides** list, select a transition.
- Modify the selected transition by changing the speed or adding a sound, in the Modify transition area.
- If you choose to play a sound, select it in the **Sound list**. The **Loop until** next sound checkbox now becomes active. Select this checkbox to play the sound repeatedly until another sound starts.
- Choose how to advance to the next slide: manually (on mouse click) or automatically. If you choose automatically, you can specify how long the slide remains visible before it automatically advances to the next slide.
- If you want the effect you just defined to apply to all slides in the show, click the **Apply to All Slides** button.
- To preview the transition effect, click the **Play button.**
- To start the slide show from the current slide (so you can see all the transitions), click the **Slide Show** button.
