Topology:

Topology describes the physical cabling layout and the logical way of moving data between components.

14.2. Network Topologies

Network Topology is the schematic description of a network arrangement, connecting various nodes (sender and receiver) through lines of connection.

14.2.1. BUS Topology

Bus topology is a network type in which every computer and network device is connected to a single cable. All devices are connected to a common backbone. Maximum nodes that can be attached are 30.

Features of Bus Topology

1. It transmits data only in one direction.
2. Every device is connected to a single cable.

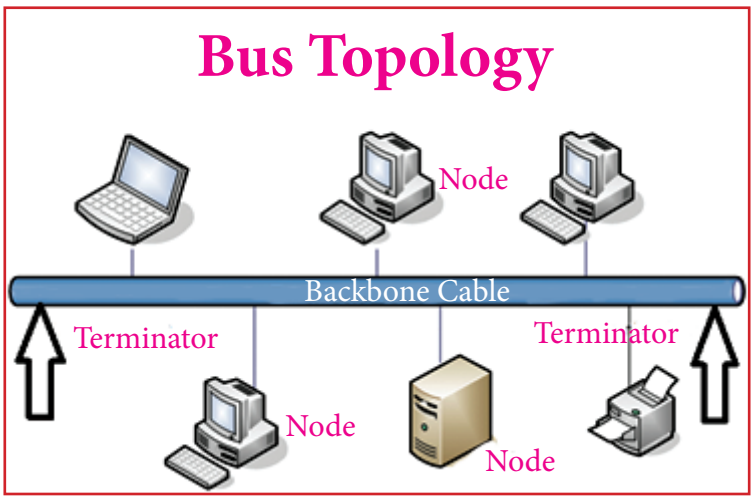

Figure 14.2 Bus Topology

Advantages of Bus Topology

1. It is cost effective.
2. Installation of device is easy.
3. Cable required is less compared to other network topology.
4. Used in small networks.
