### STAR Topology

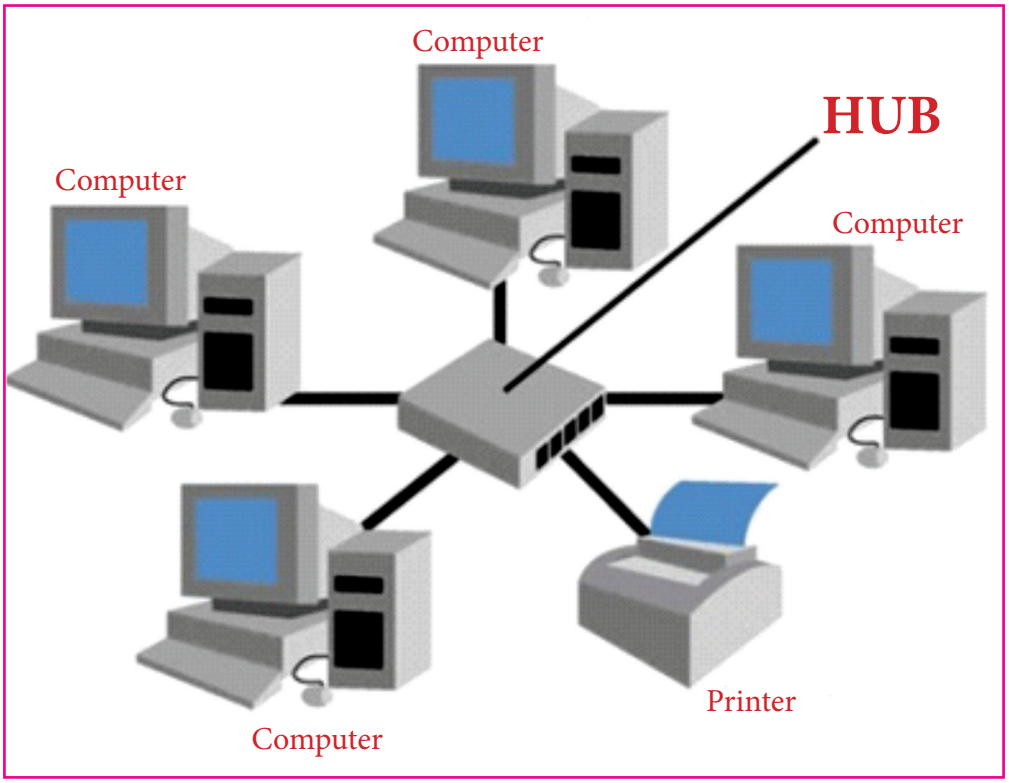

*Figure 14.3 STAR Topology*

In this type of topology all the computers are connected to a single hub/switch through cables. This hub is the central node and all others nodes are connected to the central node.

### Features of Star Topology

1. In this type, every node has its own dedicated connection to the hub.

2. The hub acts as a repeater for data flow.

### Advantages of Star Topology

1. The performance is fast with few nodes and low network traffic.

2. The hub can be upgraded easily.

3. It is easy to troubleshoot, to setup and modify.

4. Only the failed node will get affected, and the rest will work smoothly.
