TREE Topology

This type of topology is arranged in the form of a tree like structure in which top level contains **parent node** (root node), which is connected with the child nodes in the second level of hierarchy. The second level nodes are connected to the third level nodes, which in turn are connected to the fourth level nodes and so on. Except the top-level nodes, each level node has a parent node. It is also called **hierarchical topology**.

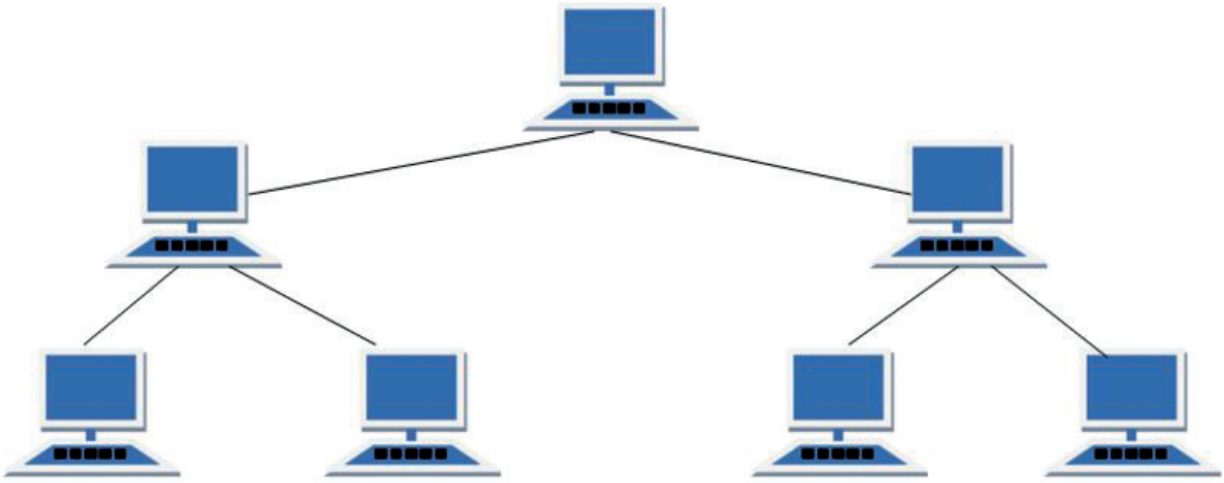

Figure 14.4 Tree Topology

Features of Tree Topology

1. It is ideal if workstations or nodes are located in groups.
2. It can be used in Wide Area Network.

Advantages of Tree Topology

1. The expansion of nodes is possible in this type.
2. It can be easily managed and maintained.
3. The error detection can be done easily.

Workshop-1

Go to your Computer laboratory and identify the type of topology followed there. Seek help from your teacher.

14.3. Types of Network

14.3.1. Computer Networks are classified into four types based on the size, distance and the structure namely: **LAN** (Local Area Network), **MAN** (Metropolitan Area Network), **WAN** (Wide Area Network) and **PAN** (Personal Area Network).

Personal area network

- A personal area network, or PAN, is a computer network that enables communication between computer devices.
- PANs can be wired, such as USB or FireWire, or they can be wireless, such as infrared, ZigBee, Bluetooth and ultra wide band (UWB).
- The range of a PAN typically is a few meters. Examples of wireless PAN (WPAN) are devices include cell phone
