Wi-Fi

Wi-Fi is a low-cost wireless communication technology. A WiFi setup consists of a wireless router which serves a communication hub, linking portable device with an internet connection. This network facilitates connection of many devices depending on the router configuration. These networks are limited in range due to the low power transmission, allowing the user to connect only in the close proximity.

Figure 14.16 wifi

Bluetooth is designed to connect two devices directly together by pairing them so they can communicate, usually for the purposes of relaying information (like sound or instructions) from one device to the other. The distance to which they will be able to connect is only short, usually several feet, while the range of Wi-Fi is greater.

Wi-Fi is generally used to connect many devices to one central device, typically a Wi-Fi enabled router, most often for the purposes of accessing the Internet. Wi-Fi is considered more stable and performs better when connecting for longer periods of time and transferring larger amounts of data.

Radio link

- A radio link is a wireless connection (also called wireless Point-to-Point connection) between two nodes, or
