- Network Topology is the schematic description of a network arrangement, connecting various nodes (sender and receiver) through lines of connection.
- A personal area network, or PAN, is a computer network that enables communication between computer devices
- A Local Area Network is a privately owned computer network covering a small Networks geographical area, like a home, office, or groups of buildings e.g. a school Network
- MANs are usually owned by large organizations to interconnect its various branches across a city.
- Computers connected to a Wide Area Networks are often connected through public networks
- A fibre-optic cable is made of glass or plastic and transmits signals in the form of light.
- The term wireless refers to the communication or transmission of information over a distance without requiring wires, cables or any other electrical conductors.
- Bluetooth is used to connect different electronic devices wirelessly to a system for transferring and sharing data.
- Infrared technology is a type of wireless communication technology to transfer data between two infrared enabled devices through infrared radiation.
- A WiFi setup consists of a wireless router which serves a communication hub, linking portable device with an internet connection.
- Hub is a common connection point for devices in a network.
- A switch is a hardware device that filters and forwards network packets.
- Repeaters remove the unwanted noise in an incoming signal.
- Gateways serve as the entry and exit point of a network.
- A domain name is a unique name that identifies a website.
- MAC stands for "Media Access Control" Address.
- IP stands for "Internet Protocol." An IP address, is a unique address that identifies a device on the Internet or a local network.
- Wireless communications is a type of data communication that is performed and delivered wirelessly.
- The Global System for Mobile Communications (GSM) is a second generation (2G) standard for mobile networks.
- CDMA (Code-Division Multiple Access) refers to a protocol used in second-generation (2G) and third-generation (3G) wireless communications.
- General Packet Radio Service (GPRS) is a packet-switching communications protocol for cellular networks.
- WLL is a system that connects subscribers to the local telephone station wirelessly.
- Voice mail system can be thought as a message box for phone user to store voice
