15.2.2 What is URL?

Every server on the internet has an IP number, a unique number consisting of four parts separated by dots. The IP number is the server's address

Figure 15.2

At times the number keeps changing hence it is harder for people to remember number than to remember word combinations. So, addresses are given "word-based" addresses called URL. The URL and the IP number are one and the same.

A URL is an address that shows where a particular page can be found on the World Wide Web. URL is an abbreviation for **'Uniform Resource Locator (URL)'.**

15.2.3 Who Governs the Internet?

One of the most frequently asked questions about the internet is, " Who runs it?" The truth is that no centralized management of the internet exists.

ICANN was created on September 18, 1998, and incorporated on September 30, 1998, in the US State of California. It is headquartered in the Playa Vista neighborhood of Los Angeles.

The internet as a whole does not have a single controller. But the internet society, which is a voluntary membership organization, takes the responsibility to promote global information exchange through the internet technology. Internet Corporation for Assigned Names and Numbers(ICANN) administers the domain name registration. It helps to avoid a name which is already registered.

15.3.4 What is W3C?

W3C stands for "World Wide Web Consortium." The W3C is an international community that includes a full-time staff, industry experts, and several member organizations. These groups work together to develop standards for the World Wide Web.

The World Wide Web Consortium (W3C) is an international organization committed to improving the web. It is made up of several hundred member organizations from a variety of related IT industries. W3C sets standards for the World Wide Web (WWW) to facilitate better communication ability and cooperation among all web stakeholders. It was established in 1994 by the **creator of the WWW,** Tim Berners-Lee.
