Using Dialog Box:

Format → Paragraph displays the paragraph dialog box as shown in Figure 6.20, select the Indent & Spacing tab which has the indent group which has three options.

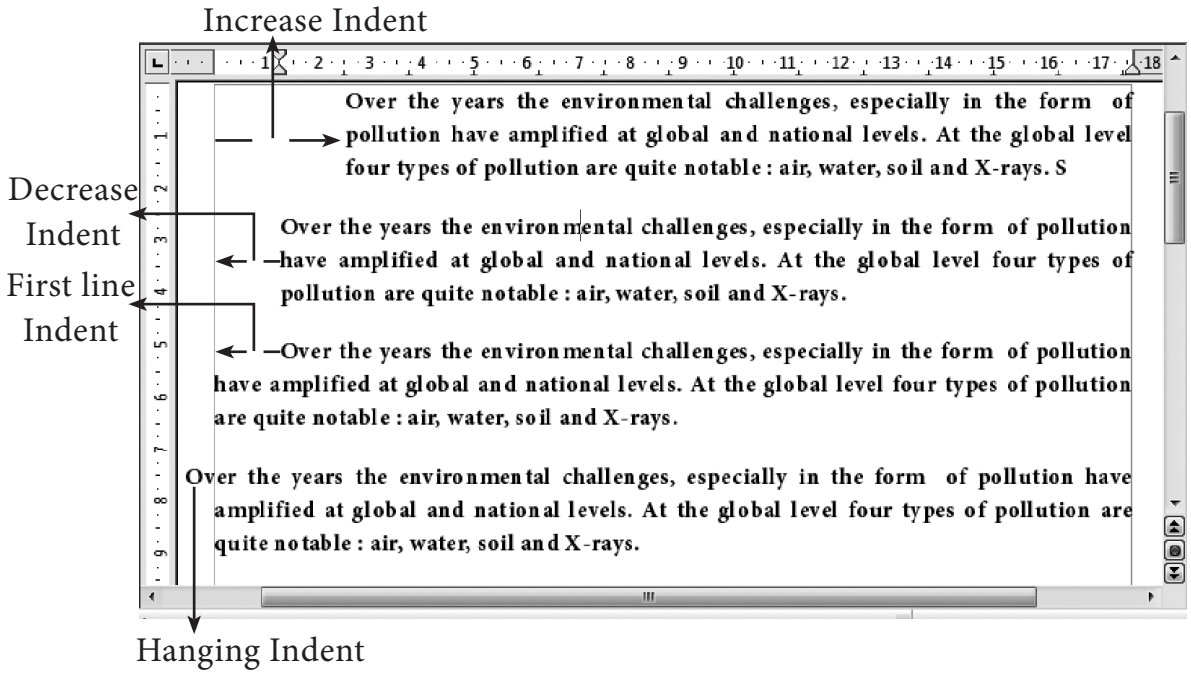

Left Indent : This is the default indent where a paragraph is moved away from the left margin. In the paragraph dialog box, in the "**Before Text**" spin box as shown in Figure 6.20, enter a value which moves the paragraph away from the left margin.

Right Indent : This is another type of indent which moves the paragraph away from the right margin. Enter a value in the "**After text**" spin box of the paragraph dialog box, which results in right indent.

First Line Indent - A first-line indentation indents the first line of the paragraph. It is the most common way to start a new paragraph. This indent can be applied by **Format → Paragraph → Indents & Paragraph** tab, select first line option in the indent group, enter a positive value which results in first line indent.

Hanging indent – This is a special kind of indent where the first line of the paragraph alone hangs outside leaving the rest of the text. To apply Hanging indent, a negative value is given in the "**first line**" option of the paragraph dialog box.

Example 6.2 shows different kinds of indents.

6.8.3 Bullets and Numbering

Bullets and numbering are used to emphasize list of things and make list easy to read and follow. It provides an excellent way to control the appearance in the form of bulleted or numbered list.
