B. South America

P2D7T6

Next to Asia, Africa and North America, South America is the fourth largest country in the World. Most of the South American continent lies within the Southern Hemisphere and hence called as the "Southern Continent". The Isthmus of Panama in the North West connects South America with North America.

Together with the Central America, South America is also known as Latin America, having been discovered and colonized mostly by the Latin's, i.e., The Spanish and the Portuguese.

Location

South America lies between 12°N and 55°S latitudes and 35°W and 81°W longitudes. The Equator (0° latitude) passes through the mouth of the Amazon River. The Tropic of Capricorn (231/2° S longitude) passes through the Rio de Janeiro in Brazil. South America is inverted triangular shaped landmass. The area of the continent is 17, 840, 000 Sq. Km., which occupies 12 percent of the world's land area.

Political division of South America

Physiography

South America has marked resemblances in structure and relief of North America. South America has some of the oldest and the youngest rocks of the world. On the basis of topographical features, the continent may be divided into the following physiographic divisions:

- The Andes Mountains
- The River Basin or Central Plains
- The Eastern Highlands
