d. light rays get reflected

11. Which of the following facts explain how shadows are formed?

a. Light travels in straight lines

b. Opaque bodies do not allow light to pass through them

c. Reflection occurs at a smooth surfaces like mirrors

d. Lateral inversion happens

a. both A and B

b. both A and D

c. both B and C

d. only A

II. Fill in the blanks

1. A plane mirror produces a _____ image
2. A _____ reflection helps us to see the objects
3. The light ray gets _____ when it falls on any polished surface.
4. Sunlight is a blend of _____ colors
5. The splitting of white light in to seven colors is called _____
6. The moon _____ sun light
7. The sunlight can be split into its constituent colors using _____
8. Reflection of light from rough surface is called _____ reflection

III. Say TRUE or FALSE

1. The image of right hand in a plane mirror looks like a left hand
2. Rainbow is formed by dispersion of which light by water drops
3. The image formed by the plane mirror is laterally inverted, hence the image seen through the periscope is also laterally inverted
4. We see planets because they reflect light from the sun
5. We see a book because it reflects the light that falls on its surface
6. The image formed in a pinhole camera is always inverted
7. The image formed in a pinhole camera is always the same size as the object
8. The image formed in a plane mirror is upside down
9. A plane mirror is opaque
10. A shadow is formed on the same side of the object as the source of light.
11. we are able to see things around us with the help of regular reflection
12. After passing through a prism, white light splits into a band of seven colours

IV. Match the following

1. Rectilinear propagation	-	Primary source of light
2. Plane Mirror	-	Non-luminous object
3. Fire fly	-	Periscope
4. The Moon	-	Pinhole camera
5. Wide light source	-	Spectrum of light
6. Regular reflection	-	luminous object
7. The sun	-	Penumbra
8. Band of seven colors	-	Glossy surface
