EVALUATION

I. Choose the correct answer

1. How many amino acids are found in nature?

   a) 20 b) 100 c) 300 d) 25

2. Which basic amino acid is neutral or basic based on chemical environment?

   a) Lysine b) Arginine c) Tryptophan d) Histidine

3. At Isoelectric point (pI), the ionic form of amino acid is called as

   a) Anion b) Zwitter ion c) Cation d) None of the above

4. Which amino acids cannot be synthesized by our body?

   a) Non-essential amino acids b) Polar amino acids

   c) Essential amino acids d) Aromatic amino acids

5. To which hierarchical level of protein structure does α helix belong?

   a) Primary structure b) Secondary structure

   c) Tertiary structure d) Quarternary structure

II. Fill in the blanks

1. Planarity of the peptide bond is due to ---------- character
2. Each turn of an α helix contains ---------- amino acids
3. Beta barrel is a ----------
4. The covalent bond formed between two cysteine residues is called ----------
5. The unit for protein size is ----------

Answer the following in brief

1. What are essential amino acids ?
2. What are the four hierarchical levels of protein structure?
3. Write the reaction of proteins with Ninhydrin.
