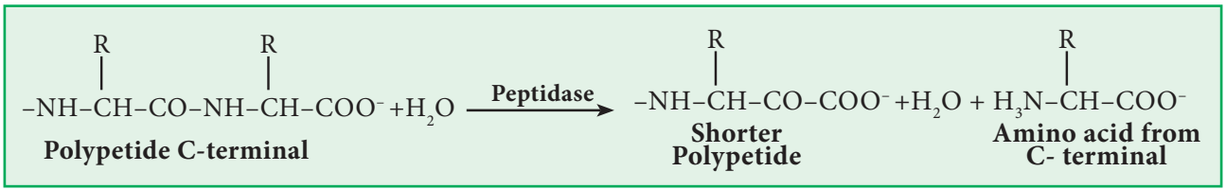
3) Hydrolase:

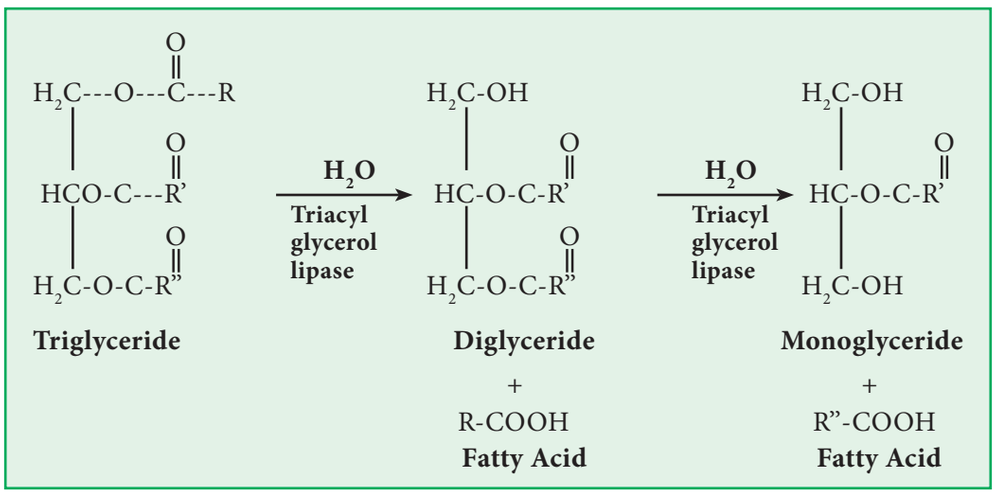
These are enzymes which catalyze the hydrolysis of substrates. They bring about the hydrolysis by adding water.

Example : a) Lipase b) Urease c) Glycosidase.



Lipase (EC 3.1.1.3):

These are enzymes which hydrolyze the ester linkage. For example triacyl glycerol lipase (EC 3.1.1.3) splits the ester linkage between glycerol and fatty acid.



4) Lyases:

These enzymes catalyze the addition or elimination of groups like H_2O, CO_2, and NH_3 etc. Example: Aldolase, decarboxylase
