II. Fill in the blanks

6. Glutamine synthetase is an example for the class of enzymes called ----------
7. The inhibitor that resembles the substrate is called ----------
8. ---------- is used to digest gelatin in the process of recovering silver from photographic films
9. ---------- and ---------- are the enzymes used therapeutically to treat blood clots
10. ---------- is the serum enzyme that acts as a early marker for myocardial infarction.

III. True or False.

11. Enzyme substrate complex is a permanent stable complex.
12. Malonate is the competitive inhibitor of succinate dehydrogenase.
13. An enzyme substrate complex is formed in all the enzymatic reactions.
14. The degree of competitive inhibition cannot be decreased by increasing the concentration of the substrate.
15. An uncompetitive inhibitor has affinity towards ES complex.

IV. Give short answers for the following:

16. What are enzymes? Why are enzymes important for living organisms?
17. Is there a difference between the initial and the final energy levels in catalyzed and non-catalyzed reactions?
18. Give any two examples for an enzymatic reaction.
19. Justify the need for a systematic nomenclature for enzymes.
20. Relate the reaction pH with enzyme activity.

V. Answer the following:

21. What are enzyme cofactors? Describe the relationship between vitamins and enzyme cofactors?
22. With appropriate examples describe the different classes of enzymes and their nomenclature system.
