mucoproteins (or) mucoids (or) proteoglycans. They contain 95% carbohydrate and 5% protein.

e. Examples : i) hyaluronic acid ii) heparin iii) chondroitin sulpahte iv) keratan sulphate v) dermatan sulphate.

(i) Heparin:

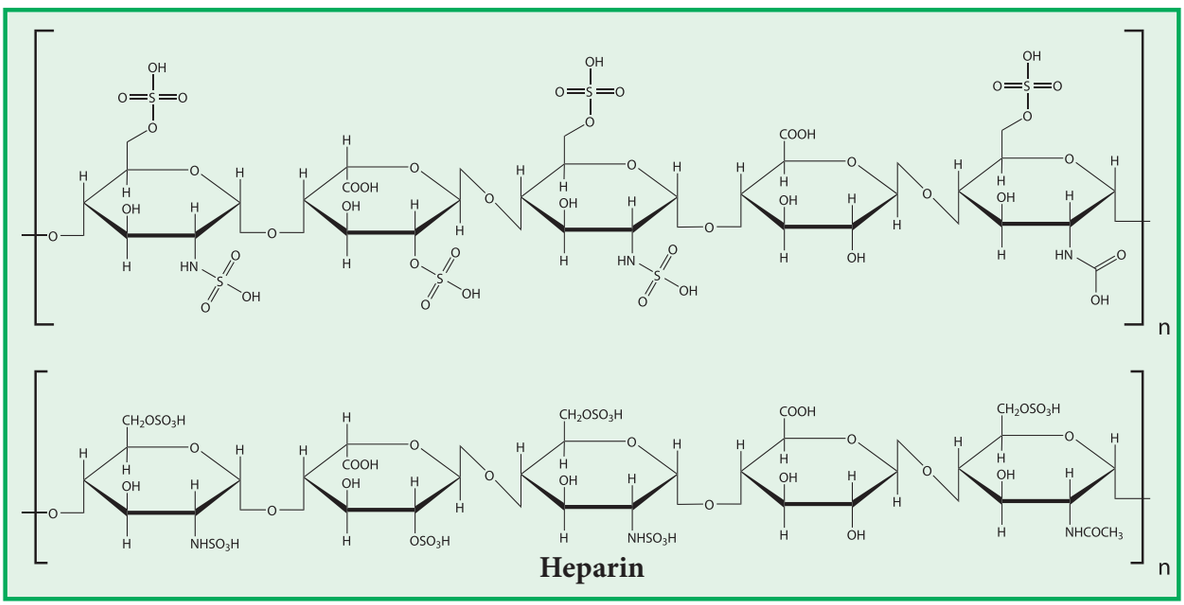

a. It is a mucopolysaccharide present in liver, lung, spleen, kidney, and blood.

b. It is a blood anticoagulant.

c. Heparin is composed of alternating units of N-sulpho-glucosamine-6 sulphate and L-iduronate-2-sulphate.

d. These two molecules are held together by α(1-4) glycosidic bond.

e. Its molecular weight 20,000.

Heparin

ii) Hyaluronic acid :

a. It is a mucopolysaccharide present in syanovial fluid, vitreous humor of eyes, cartilage tissues, loose connective tissues and in bacteria.

b. It consists of repeated units of α-glucuronic acid and N-acetylglucosamine.

c. These two molecules are held together by α(1-3) glycosidic bond.

d. It is an unbranched chain polymer.
