- Carbohydrates have the tendency to undergo oxidation and reduction in the presence of suitable reagents.
- The aldehyde and keto group of a monosaccharide can react with any one hydroxy group present in the same molecule to form cyclic hemiacetals or hemiketals.
- Sugars differing in configuration at the C1 asymmetric center are known as “anomers” and at C4 are called as “epimers”.
- Polysaccharides are classified as homo polysaccharides and heteropolysaccharides which have same sugar moiety and different sugar moiety, respectively.
