EVALUATION

I. Choose the correct Answer

1. Which of the following is a characteristic of lipids?
   a) They are not soluble in water
   b) They are either fats or oil
   c) They are polar molecules
   d) They are composed of nitrogenous chains

2. What are the components of triglyceride molecules
   a) One glycerol and three fatty acids
   b) One cholesterol and two fatty acids
   c) One glycerol and one cholesterol
   d) One glycerol and two fatty acids

3. Why is butter solid at room temperature, while vegetable oil is a liquid?
   a) Butter is saturated, where vegetable oil is unsaturated
   b) Butter is polar molecule, where vegetable oil is non-polar molecule
   c) Butter is non-polar molecule, where vegetable oil is polar molecule
   d) Butter is unsaturated, where vegetable oil is saturated

4. What happens when hydrogen reacts with vegetable oil (Vanaspati)
   a) The hydrogenated vegetable oil will contain fewer trans fats
   b) The hydrogenated vegetable oil will become solid at room temperature
   c) The hydrogenated vegetable oil will become polarized
   d) The hydrogenated vegetable oil will become saturated.

5. Fatty acids are building blocks of
   a) Stigma sterol b) Tri-acyl glycerol c) Cholesterol d) Ergosterol

6. Ergosterol is a precursor for _____
   a) Vitamin A b) Vitamin E c) Vitamin C d) Vitamin D

7. _____ is a fat soluble vitamin
   a) Vitamin A b) Vitamin B12 c) Vitamin C d) Vitamin B7

8. Hydrolyses of fat with _____yield soap
   a) Acid b) Alkali c) Ketone d) Ether
