

Figure 8.8 Sources of vitamin E

Functions:

- **Antioxidant property**:

Vitamin E is involved in removal of free radicals and prevents their effects on unsaturated lipids of membrane and thus helps maintain the integrity of cell membrane.

- It protects the red blood cells against hemolysis.
- It plays a role in normal functioning of muscles.
- Vitamin E is essential for reproductive processes.
- It plays an important protective role during ageing of cells.
- Vitamin E is essential for biosynthesis of coenzyme Q.
