

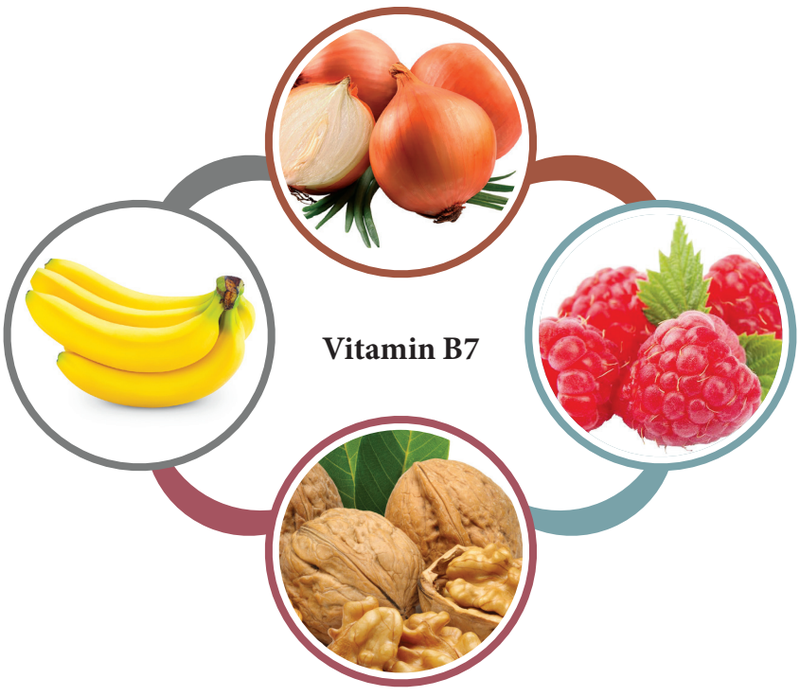

Figure. 8.26 Sources of biotin

Deficiency:

Egg white contains a protein called avidin (egg white injury factor) which binds very tightly with biotin, preventing its absorption and thereby inducing biotin deficiency. The symptoms include depression, hair loss and muscle pain.

vii. Folic acid (Vitamin B9):

Folic acid otherwise known as vitamin B9, folavin or folate is essential for cell division. Its active coenzyme is tetrahydrofolate (THF). The naturally occuring folate is susceptible to high heat and UV light and also be subject to oxidation.
