II. Give short answer for the following:

1. How will you classify vitamins?
2. Name the fat soluble vitamins.
3. What are the different forms of vitamin B6?
4. Name one important enzyme in which $NADP^+$ acts as coenzyme.
5. What is the biologically active form of thiamine?
6. What are the effects of vitamin B12 deficiency?
7. What are the types of vitamin D?
8. Name the naturally occurring sources of vitamin K?
9. Write the chemical name of vitamin E.
10. State the sources of thiamine.

III. Give short answer for the following:

1. Give the functions of vitamin D
2. Explain the antioxidant property of vitamin E
3. Write a note on deficiency of vitamin B1
4. Give an example of metabolic reactions where TPP acts as coenzyme
5. State the biochemical functions of vitamin B3.
6. What is the biologically active form of riboflavin?
7. Write short notes on niacin deficiency.
8. What are the deficiency manifestations of vitamin D?

IV. Answer the followings

1. What are the functions of vitamin A?
2. Give an account on functions and deficiency symptoms of Vitamin K
3. Explain the functions of thiamine.
4. Write the various biological functions of pyridoxine.
5. Explain the functions and deficiency of vitamin C.

SUMMARY

Vitamins are low molecular weight organic compounds that are essential for many functions of living organisms. They can be classified as water soluble and fat-soluble vitamins based on their solubility. The fat-soluble vitamins that include A, D, E and K gets readily
