c. Transport of Iron

d. Transport of bilirubin.

II. Give short answer for the following

1. Name the macro elements
2. What are the most common sources of sodium?
3. What is the site of absorption of calcium?
4. Name the dietary sources of phosphorus.
5. Write a note on iron deficiency.
6. How is copper absorbed?
7. Name an enzyme which requires copper for activity.
8. What are sources of magnesium?
9. Give the factors affecting absorption of magnesium.
10. Mention the metabolic functions of T4 and T3.
11. Explain the deficiency symptoms of zinc.
12. Write a note on deficiency symptoms of manganese.
13. Briefly explain the toxicity of selenium.

III. Answer the following in one or two sentences

1. State the functions of potassium in the body.
2. Give the deficiency states of calcium.
3. State some important functions of magnesium.
4. List the factors which influence the absorption of iron.
5. Mention the functions of molybdenum.
6. Write the biological functions of sulphur.
7. What are functions of chromium?

Answer the following in detail

1. Explain the factors affecting absorption of calcium.
2. Give an account on functions, factors affecting absorption and deficiency state of iron.
3. Mention the functions and deficiency symptoms of copper.
4. Write down the biological functions and deficiency symptoms of selenium.
5. Give the functions of fluorine and zinc.
