Lymph

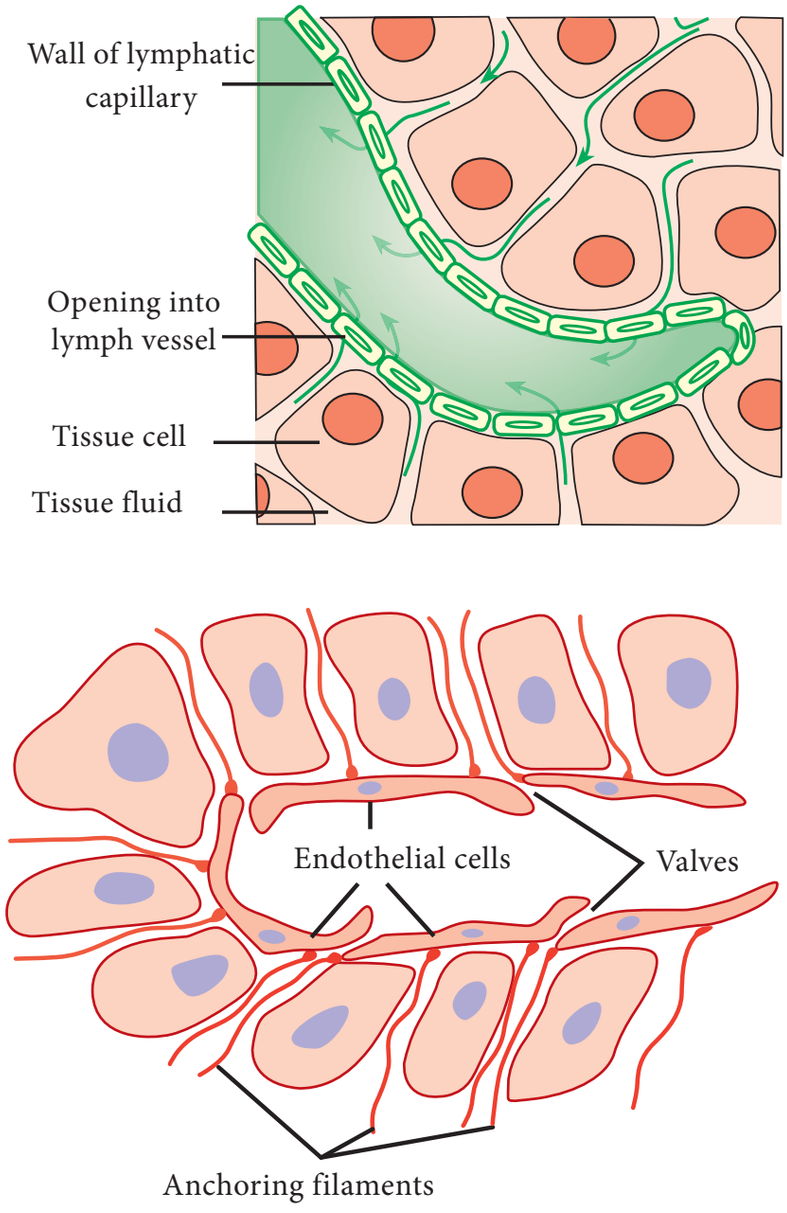

Figure 1.17 Lymph node

Formation and flow of lymph and interstitial fluid

The fluid present in the lymphatic system is called lymph. Lymph is a colorless fluid. It is composed of fluid matrix, plasma and leucocytes. It bathes tissues and organs in its protective covering. There are no erythrocytes in lymph and it has lower protein content than blood. Its pH is as same as that of blood (7.35 to 7.40 i.e. slightly alkaline).

When the blood passes through the capillaries in tissues, some water, along with many small water-soluble substances, move out into the spaces between the cells. Larger
