14. What will be the ratio of ($[HPO_4^{2-}]/[H_2PO_4^-]$) of phosphate buffer at pH 7.4 and $pK_a$ 6.8 in blood.

a. 2 b. 3 c. 4 d. 5

15. Most of the water in the human body is present in

a. intracellular fluid b. total extracellular fluid

c. plasma d. interstitial fluid

16. Which type of formed elements are high in number in blood?

a. leucocytes b. erythrocytes c. thrombocytes

d. lymphocytes

17. What is the nature of normal urine?

a. strongly acidic b. strongly basic c. slightly alkaline

d. slightly acidic

18. Identify the most important buffer system in blood plasma from the following:

a. bicarbonate buffer b. phosphate buffer c. protein buffer

d. hemoglobin buffer

19. Which form of hemoglobin have more affinity towards hydrogen ions?

a. oxyhaemoglobin b. deoxyhaemoglobin c. cyanohaemoglobin

d.methyhaemoglobin

20. Excretion of acidic urine _____ pH in extracellular fluid.

a. decreases b. increases c. does not alter

d. both a and b
