b. Glycolipids

The lipids which contain a carbohydrate moiety linked with ceramide is called a glycol lipid.

Examples : Cerebroside and gangliosides.

c. Lipoproteins

A complex of proteins, lipid and cholesterol is called as a lipoprotein. The protein moiety in the lipoprotein is known as apoprotein.

Examples:

- Chylomicron
- Very low density lipoprotein (VLDL)
- Low density lipoprotein (LDL)
- High density lipoprotein (HDL)

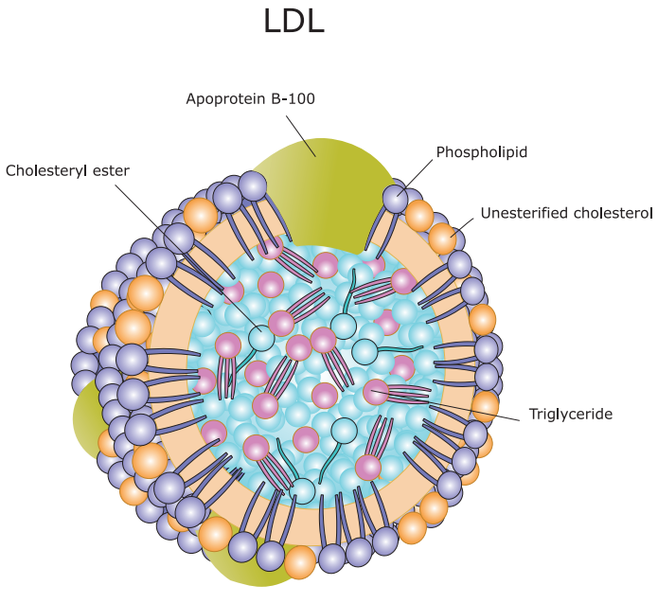

Figure 2.13 Structure of lipoprotein (LDL)

Derived lipids:

Lipids that are derived from the hydrolysis of simple and compound lipids are called derived lipids.
